

Dent Relief Kit

THE QUICK WAY TO PUSH OUT SIZEABLE DENTS

DENT RELIEF KIT

A kit comprising three different size Kevlar reinforced inflatable pads which offer different depths when inflated. By slipping the appropriate pad behind a dented panel the dent can be 'popped out' by slowly inflating the pad. Although the dent will still need final dressing it speeds up the time required to repair major dents.

Enables the technician to quickly and easily 'pop out' sizeable dents before final dressing. Three different size Kevlar reinforced inflatable pads are supplied in the kit which also includes two blocking pieces, a tool to deal with dents on swage lines and an air gun – all you need is an air supply.

Each pad inflates to a different depth, the most appropriate one is selected for the job.

Easy to use by any competent technician.

Benefits:

- Quick & easy to use.
- Reduces repair time.
- Reduces the need to remove interior trim.
- Easy to use by any competent technician.
- No ongoing running costs.

The kit comprises:

- 3 different sized Kevlar re-inforced bags
- 2 different sized blocking pieces
- Swage tool
- Air gun
