

# Flatliner

THE COMPLETE SYSTEM FOR  
REPAIRING BODY PANELS

Allows you to work from the outside without removing internal parts. This significantly speeds up work times and enables you to repair the original body panel without having to replace any parts damaged during the stripping process. The Flatliner system can be used for all types of damage to body panels.

## TRAINING PROGRAMME

DURATION	1 day
INTENDED FOR	Body Technicians and Panel Beaters, who have experience in repair and refinishing techniques and their application to modern vehicle body panels. Maximum of 2 Technicians.
OBJECTIVES	To demonstrate the advantages of repairing and refinishing body panels rather than replacing, thus maintaining a high standard of cost effective accident damage repair. Practical involvement and full participation by all personnel will be required to ensure the overall success of this course.
CERTIFICATION	All courses are certificated when successfully completed. The certificate issued will be determined by the individuals ability and the final results of any end-of-course test, to ensure the delegate meets the required standard. This certification complies with the requirements of PAS125 which directs bodyshops to the achievement of a safe and technically sound repair.
CONTENT	<ol style="list-style-type: none"><li>1) Health &amp; Safety requirements</li><li>2) Identification of panel material - locating and using information</li><li>3) Equipment available - components tools of the Flatliner system</li><li>4) Repair procedures - welding, pulling, panel beating and finishing</li><li>5) Identification of substrates and the correct refinish products</li><li>6) Cleaning/preparation procedures</li><li>7) Availability of fillers, stoppers etc.</li><li>8) Final assessment</li></ol>
